

Epson's security solutions

Business imaging security solutions

EPSON[®]
EXCEED YOUR VISION

Protect what matters most to your business

It's easy to overlook important security measures with networked devices. Multifunction printers (MFPs), scanners and any other connected or networked device can be open to security weaknesses.

A study by Quocirca found that most enterprises are concerned about access to their IT network via an unsecured printer and their lack of an audit trail when using MFPs, scanners and copiers. Discover how our solutions can help your business stay secure and compliant with EU data regulations.

With the arrival of the new General Data Protection Regulation (GDPR) comes a new set of rules for businesses. The law forces companies to become more regimented in their approach to data security, as lax use, storage of data, or misuse of unnecessary customer data will be severely punished; with penalties reaching up to 20 million Euros or 4% of a company's global turnover, whichever is greater. Epson's secure features can help you to comply with the regulations.

Epson's security approach

Strengthening the network capabilities of your devices is key to our security approach. To ensure the security of Epson devices throughout their lifecycle, every Epson WorkForce Pro printer is built on three core principles:

- 1 Product security is the basis for quality
- 2 Information and knowledge about security is actively shared, so you're always up to date
- 3 Vulnerabilities are constantly reviewed to maximise device protection

Security features designed around you

Protected data and secure networks come as standard with Epson's MFPs and scanners, using features that can help with your General Data Protection Regulation (GDPR) and Corporate Social Responsibility (CSR). Our full security solution can give you the assurance that your business meets the latest security requirements.

PIN code printing and scanning¹

Restrict access to confidential printed information by using the secure PIN Code function on WorkForce Pro printers.

Secure communication

Filter IP addresses, services, reception and transmission port numbers that have access to Epson devices with the IP Filtering function. You can also encrypt all network communication using the IPSec function.

Protecting addresses

Prevent the disclosure of address information and unauthorised manipulation with a secure password when editing your printer's address book.

Document processing and data management

Manage multiple tasks centrally, such as scan job profiles and user access rights. Administrators can control access to jobs with User ID, LDAP Active Directory and PIN codes.

On device

Administrators can remotely lock screens to prevent unauthorised profile amendments. Each user's profile can be made available, wherever they are in the business.

PDF protection

Add password protection functionality to scanned PDF files to protect against unauthorised viewers and prevent document editing and printing.

Why make the switch to business inkjet printing?

Epson's environmental efforts have grown out of a genuine respect for our environment. That's why when it comes to choosing technology, we understand that businesses put reliability and environmental impact at the top of their lists. When you make the switch from laser printing to inkjet, you are not only choosing lower energy consumption, lower waste and reduced cost of ownership; you are also choosing a faster, high quality and high performance printer with multiple bottom-line benefits for your business.

up to **92%**

less CO₂
than lasers³

96%

less energy
than lasers²

94%

less waste
than lasers²

3.5x

faster
than lasers²

Don't get left behind - make the switch to business inkjet today.
